Siri Chandana Dasari

Prosper, Texas, United States | siridasari647@gmail.com | (469) 734-2088 | github.com/siridasari001 | linkedin.com/in/sirichandanadasari | siridasari001.github.io/portfolio/

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience in SQL, Python, data analysis, data quality, database systems, and business intelligence. Skilled in transforming raw datasets into actionable insights through data cleaning, modeling, exploratory analysis, automation, and visualization.

EDUCATION

University of North Texas Aug 2024 - May 2026
M.S., *Computer Science* GPA: 3.7/4.0

Jun 2020 - May 2024
B.S., *Computer Science/Data Science* GPA: 3.5/4.0

SKILLS

Languages: Python, SQL, HTML5, CSS3
Data & Analytics: Pandas, NumPy, Scikit-learn, Data Cleaning, EDA, Feature Engineering, Data Quality
Databases & BI: MySQL, PostgreSQL, SQLite, Tableau, Power BI
AI & Data Engineering: RAG, LLM Applications, Data Profiling, Metadata Analysis, Streamlit
Tools: Git, GitHub, Figma, Microsoft Azure, Titanium, ASEBA, PARiConnect

WORK EXPERIENCE

Virufy | Web Developer Oct 2026 - Present
- Resolve website development tickets through Jira, implementing front-end updates and bug fixes to improve website functionality and user experience.
- Maintain responsive website layouts and blog components across screen sizes while preserving existing functionality and minimizing regressions.
- Collaborate with the development team through Slack and Git-based workflows to track issues, validate changes, and support reliable website updates.

DataAnnotation | AI Engineer Oct 2026 - Present
- Evaluate AI-generated code and programming solutions for correctness, efficiency, and adherence to requirements.
- Identify coding errors, logical inconsistencies, and potential improvements in AI-generated responses.
- Provide structured feedback to support the improvement of AI model performance and coding capabilities.

Child and Family Resource Clinic-UNT | Data & Operations Assistant May 2025 - May 2026
- Managed and validated client and assessment data across Titanium, ASEBA, and PARiConnect, ensuring accurate records and reliable data retrieval.
- Streamlined data-intake and ticketing workflows while developing standardized reporting templates and analytical summaries to improve tracking, reporting consistency, and operational efficiency.

Areksoft pvt ltd | Software engineer Intern Jul 2023 - Oct 2023
- Developed responsive frontend interfaces using HTML and CSS, translating Figma designs into user-friendly workflows.
- Analyzed CRM user journeys in Recordrr CRM, identifying opportunities to improve navigation, data-entry efficiency, and workflow usability.

PROJECTS

Atlas: Enterprise Data Intelligence & Governance Copilot
- Building a Python-based data intelligence platform combining dataset profiling, data quality validation, metadata analysis, and AI-assisted data exploration.
- Implemented reusable workflows to detect missing values, duplicate records, invalid values, and potential PII columns in structured datasets.
- Developing a hybrid retrieval-augmented generation (RAG) architecture with vector search and SQL-agent guardrails to support natural-language data exploration and governance.

DataSentinel: Data Quality & Anomaly Detection Platform
- Built a Python-based data quality and anomaly detection platform using Pandas, NumPy, SQLite, and Streamlit to identify missing values, duplicate records, schema violations, and behavioral anomalies.
- Engineered reusable validation and profiling workflows to evaluate dataset completeness, consistency, structural integrity, and unusual customer behavior patterns.
- Developed an interactive Streamlit dashboard with SQLite-backed quality results, enabling users to explore detected issues, assess data reliability, and prioritize quality improvements.

Distributed Bookstore Database System
- Architected a distributed bookstore database using horizontal fragmentation across three server sites to improve transaction efficiency, scalability, and fault tolerance.
- Designed normalized site-level schemas, SQL query protocols, and cross-site synchronization workflows to maintain data consistency and support reliable distributed transactions.

Texas Airbnb Price Prediction & Property Segmentation
- Analyzed Texas Airbnb listings using Python, Pandas, and Scikit-learn, performing data cleaning, preprocessing, exploratory analysis, and feature analysis to identify factors influencing property prices.
- Compared Linear Regression, Decision Tree, Random Forest, Gradient Boosting, KNN, and SVR using RMSE, MAE, and R2 ; Random Forest achieved the strongest baseline performance with R2 =0.48.
- Applied K-Means clustering to segment properties by pricing and characteristics, identifying distinct groups of listings with similar market profiles.

CERTIFICATIONS & ACHIEVEMENTS

- Google Data Analytics Professional Certificate
- Microsoft Azure Fundamentals (AZ-900)
- Tableau Desktop Foundations
- HackerRank SQL (Basic & Intermediate) - HackerRank
- AI & LLM Engineering Mastery - GenAI
- RAG Complete Guide
